Add collaborators transcript

Philippe Padioleau

To let other people edit your document you have to add them to the project.

The only thing to know is the name of your collaborator. For the demo, we take a collaborator Anthony Pena alias Kuroidoruido.

How add a new collaborator ?

- In your project home, click on settings at the right.

- Go to the collaborator section in the settings of your project.

- Search him with his name and valid with "add collaborator".

Your collaborator will automatically receive a notification mail.
